Subject: FOIA: Fukushima radiation releases
Date: Wednesday, January 22, 2014 12:27:06 PM

Dear Mr. Makus:

This is in response to your Freedom of Information Act request for information about EPA's completion of an environmental impact report concerning radiation from Fukushima. EPA has not been involved in creating any kind of environmental impact report about the effects of the Fukushima radiation accident. Our only involvement was to operate our network of radiation monitors which we call RADNET. Our monitors showed that after a slight rise in radiation levels in air, milk, precipitation and drinking water, levels returned to background very quickly. Historic results can be found on our Envirofacts website

http://iaspub.epa.gov/enviro/erams_query_v2.simple_query. Hence there really was no impact on public health or the environment of the continental United States, Alaska and Pacific Islands from the Fukushima accident.

I hope this information has been helpful.

Sincerely

Shelly Rosenblum
